

PROVIDING WASHOUT SOLUTIONS

Builder's Concrete is pleased to introduce the **ENVIROGUARD** CHUTE WASH SYSTEM!
This system will eliminate the need for on-site washout areas while allowing our trucks to washout anywhere, leaving behind no mess!

The wash water is all captured at the end of the chutes in the bucket attachment. The bucket contains a screen which captures washed coarse aggregate particles, which is all that is left after wash out is complete. Sand and slurry water are pumped from the bucket back into the mixer drum for disposal at the concrete plant.

Clean washed aggregate is all that is left over after a complete washdown

Leaking washout pit

Failed washout pit

Concrete washout areas are no longer needed with the **Enviroguard** Chute Wash System provided by Builder's Concrete. This eliminates the risk of failed washout areas which can lead to environmental hazards and costly fines. For more information and video demonstration please visit:

<http://www.enviroguard.ca/>

Benefits:

- Environmentally Friendly
- Eliminates Disposal Costs
- Reduced Risk of Fines
- Cleaner Jobsites
